Q.no

Q.

What are Cyber Crimes? Why Cyber Crimes are growing in India day-by-day? What is the machinery involved in India to control cyber crimes?

Ans.

Cyber Crimes are crimes involved in the computer networking system. When a person hacks into the data of another person's computer without the authorization or prior permission, it is considered to be a cyber crime.

There are various types of cyber crimes :-

-> Cyber Stalking

-> Phishing

-> Pharming

Cyber Crimes are on rise in India day-by-day due to following reasons:-

-> Increasing complicated networks of

Information and technology

→ ~~Explain~~ Evolution of the IT sector in recent years

→ The increasing global connection in the technology sector has given a chance to countries outside India who have poor relations with India to attack the cyber security.

Government of India has provided various machinery to control cyber crimes. These are

→ National Security Council : It is a council which works for the overall security of India. So, cyber security is also involved in this.

→ National Intelligence Grid : This is an intelligence agency to track the cyber crimes by using intelligence

→ Inter-departmental Information Security Task Force : This task force played a major role in establishing CERT-In

Q.no

 

CERT-In is called Computer Emergency Research Team of India. It is formed

 

to control emergency situations related to computers.

 

→ National Planning Centre for Information Infrastructure : It is a nodal agency

 

for protecting the cyber security in India.

 

→ Cyber Security Software : There is an important software developed by Department

 

of Research and Development Centre (DRDO) to connect with the Intelligence

 

agency like RAW for protecting cyber security.

 

Hence, Cyber Crimes are an important aspect in the crime field and they need to be tackled with great care in the future also.
