Q what is E-governance? what are its stages? Explain its use value - 150 words

→ E-governance is combination of two words e- & governance. e- means electronic & governance means a process or a system by which a society, organization or a group is managed or controlled. So E-governance can be define as the use of ICT (Information communication technology) to provide govt. services, welfare to the people/citizens.

Stages of e-governance :-

1) one-way communication :- ~~exchange~~ Transfer of information from govt. to people/citizens

Two-way communication :- exchange of information betⁿ govt. to citizens

also known as B2C 2G.

2) e-services / e-governance :- Providing online services to the citizen.

Eg:- online Tax filing.

Sachin Chaudhary

④ political influence :- Conducting political surveys, online voting, etc. & online opinion polls

⑤ Interactions :- Interactions betⁿ inter-govt. & Intra govt.

E-governance uses :-

- * Cost effective
- * Effective decision making
- * Time saving
- * Citizen involvement
- * Citizen empowerment
- * Effective services
- * Accountability

Conclusion :- e-governance play an important role in providing welfare to the people

readily & effectively. There are many models such as awareness among the people & high speed internet. but e-governance is a set in right direction.
