

The Cartagena Protocol on Biosafety is a step towards ensuring the safe transfer, handling and use of LMO's created through biotechnology.

Features of the Protocol :-

1. It is an international agreement on biosafety
2. Entered into force on 11 sep 2003 and has 171 parties as signatories.
3. Objectives include:-
 - Formulating risk management measures
 - Ensuring safe transportation and handling of LMO's.
 - Setting up of Bio-safety clearing houses.
 - Promoting appropriate documentation of LMO transfer.

Therefore, Cartagena protocol is a significant step towards protection of biological diversity and bio-safety. Fair compliance with the established procedures and effective implementation can help in safeguarding environmental and human health.

The decision has proved to be ^{firmly} relieving for the people who are, all and who want to end their pain and sufferings. This has encouraged more and more people to give their medical will when they are alive and it will be helpful in controlling disease-related suicides. Passive euthanasia may serve as a boon for the old people.
