

Models of Conservation of Biodiversity:

Conservation → Protection at all times whether threatened or not. ✓

Biodiversity → Degree of variation / variety of life in the Biosphere. ✓

→ Also known as "on site" Conservation.

→ It is conservation of genetic resources in natural population of the species.

→ It is done by either protecting and cleaning the habitat or by defending the species from its predators.

→ It is a conservation technique where the species is taken out of its natural population area.

→ It contributes in development of the species or its protection. (Hybrids) ✓

→ Eg: DNA banks, botanical gardens, pollen banks etc. ✓
