

Name - Sameer Singh

Q. Artificial Intelligence in future and I.T. Revolution? Evaluate
Ans → Artificial Intelligence is the newest entrant in the technology world. It is a scientific programming mechanism which can take orders, follow instructions, calculate, code-decode and have capabilities like a human brain.

Mobile application such as SIRI, Cortana - Robots like Sophia are prime example of how Artificial Intelligence is covering over space.

For any Revolution Smart work always helped
So in context of IT Revolution, Artificial Intelligence shows the level of grasping techniques which are helpful in near future.

Many Benefits are of Artificial Intelligence in prospect of IT revolution.

a.) Efficiency - The capacity to do the task faster, efficiently in many aspects such as data-collection gives boost to AI.

b.) Scientific Advancement - Ability to work non-stop without getting tired and self backup also pushes AI for future.

c.) Self Renewal :- Using Artificial Intelligence gives immense boost to fix error on own. As we see in SIRI. They adapt and fix errors.

d.) Defense

d.) Memory Backup - The memory part plays a huge role in creating AI as a smart

Now AI has application all over the sectors. few are enlisted below.

- a) Defence - AI can be used in Unmanned vehicles. AI is used programming Missile Transmission System.
- b) Public policy - Socio Economic data collection which is called CENSUS in India requires unprecedented man-planning. AI can reduce in great significance.
- c) Education - Artificial Intelligence is useful in providing platform for Online Examinations.
- d) Transport - Self driving cars, and enhanced Accidental fixing systems are excellent examples.

But As we know it also carries concern we should look upon to.

- a) Risk of Unemployment :- In Industries as we are moving towards advancement of technology it is creating more numbers of unemployment.
- b) Danger of Hacking :- As it work totally on computer technology and programing. It gives concern of Hacking into systems.
- c) It lacks Empathy and human emotion - Many experts like S. Hawking and Elon musk have warned.
- d) Over usage - Over usage always is a great concern for any technology.

As we see in IT revolution Artificial Intelligence plays a pivotal role in future.
